Emran Consulting (Alberta) Ltd., Ruposi Bangla Aviation Services (Canada) Inc., and Ruposi Bangla Airlines (Bangladesh) Ltd. are objecting to the Development Planning of the former Bombardier Aerospace Downsview Airport and Lands by Canada Lands Company, Northcrest Developments, and Urban Strategies Inc.

Contrary to the Proposed Plan for the Downsview Airport Lands, the Conservation of the Airport and employment in Aviation and Aerospace Sectors will not be realized without retaining the Airport and further investment in the Aviation and Aerospace Manufacturing Sectors. The City of Toronto needs to maintain its tradition of being a world-class High-Tech Innovation Centre where people from all over the world can work and play in Aerospace/Aviation.

It is in the view of Emran Consulting (Alberta) Ltd., Ruposi Bangla Aviation Services (Canada) Inc., and Ruposi Bangla Airlines (Bangladesh) Ltd. that Re-Development of the former Bombardier Aerospace Downsview Airport and Lands for a mixed-residential use would likely diminish Toronto's capacity to stay innovative and competitive in the Aerospace and Aviation Sectors.

In other words, pykup industries, inc. is better positioned to operate the former Bombardier Aerospace Lands. pykup industries, inc. is an early-stage start-up with plans to innovate in Aviation and Aerospace. pykup industries, inc. will assess its strategic location as the base of operations based on PESTEL Analysis and long-term view of its products and services.

pykup industries, inc. promotes NASA's vision of Urban Air Mobility and is working towards making Aviation and Aerospace more accessible through innovation in autonomous, self-flying, and associated technological improvements. pykup industries, inc. also believes in electrification in aviation systems. It is a view of the Founders that if Canada does not invest into Research and Development and support the R&D with facilities such as Downsview Aerospace Innovation and Research (DAIR), then Ontario, Canada is highly likely to fall behind other Provinces/States/Countries to be truly competitive in offering Aerospace / High-Tech products to the world.
